Surcharging on SwipeSimple Terminal

Surcharge is a new option under Automatic Adjustments that allows merchants to apply a percentage-based fee specifically to credit card transactions.

What is Surcharging?

Surcharge is a new option in Automatic Adjustments for SwipeSimple that implements a compliant way to apply a surcharge on credit card transactions. Available exclusively on PAX Terminals, this feature applies a reseller-defined percentage to all credit card transactions.

Key Benefits

Compliant Implementation

Properly implements credit card surcharging regulations through BroadPOS integration.

Customizable Rates

Set your preferred surcharge percentage and control tax application (before or after).

Transparent Receipts

Clearly shows surcharge as a separate line item for customer awareness.

Easy Setup

Simple configuration through the standard Automatic Adjustments settings.

Credit Card Only

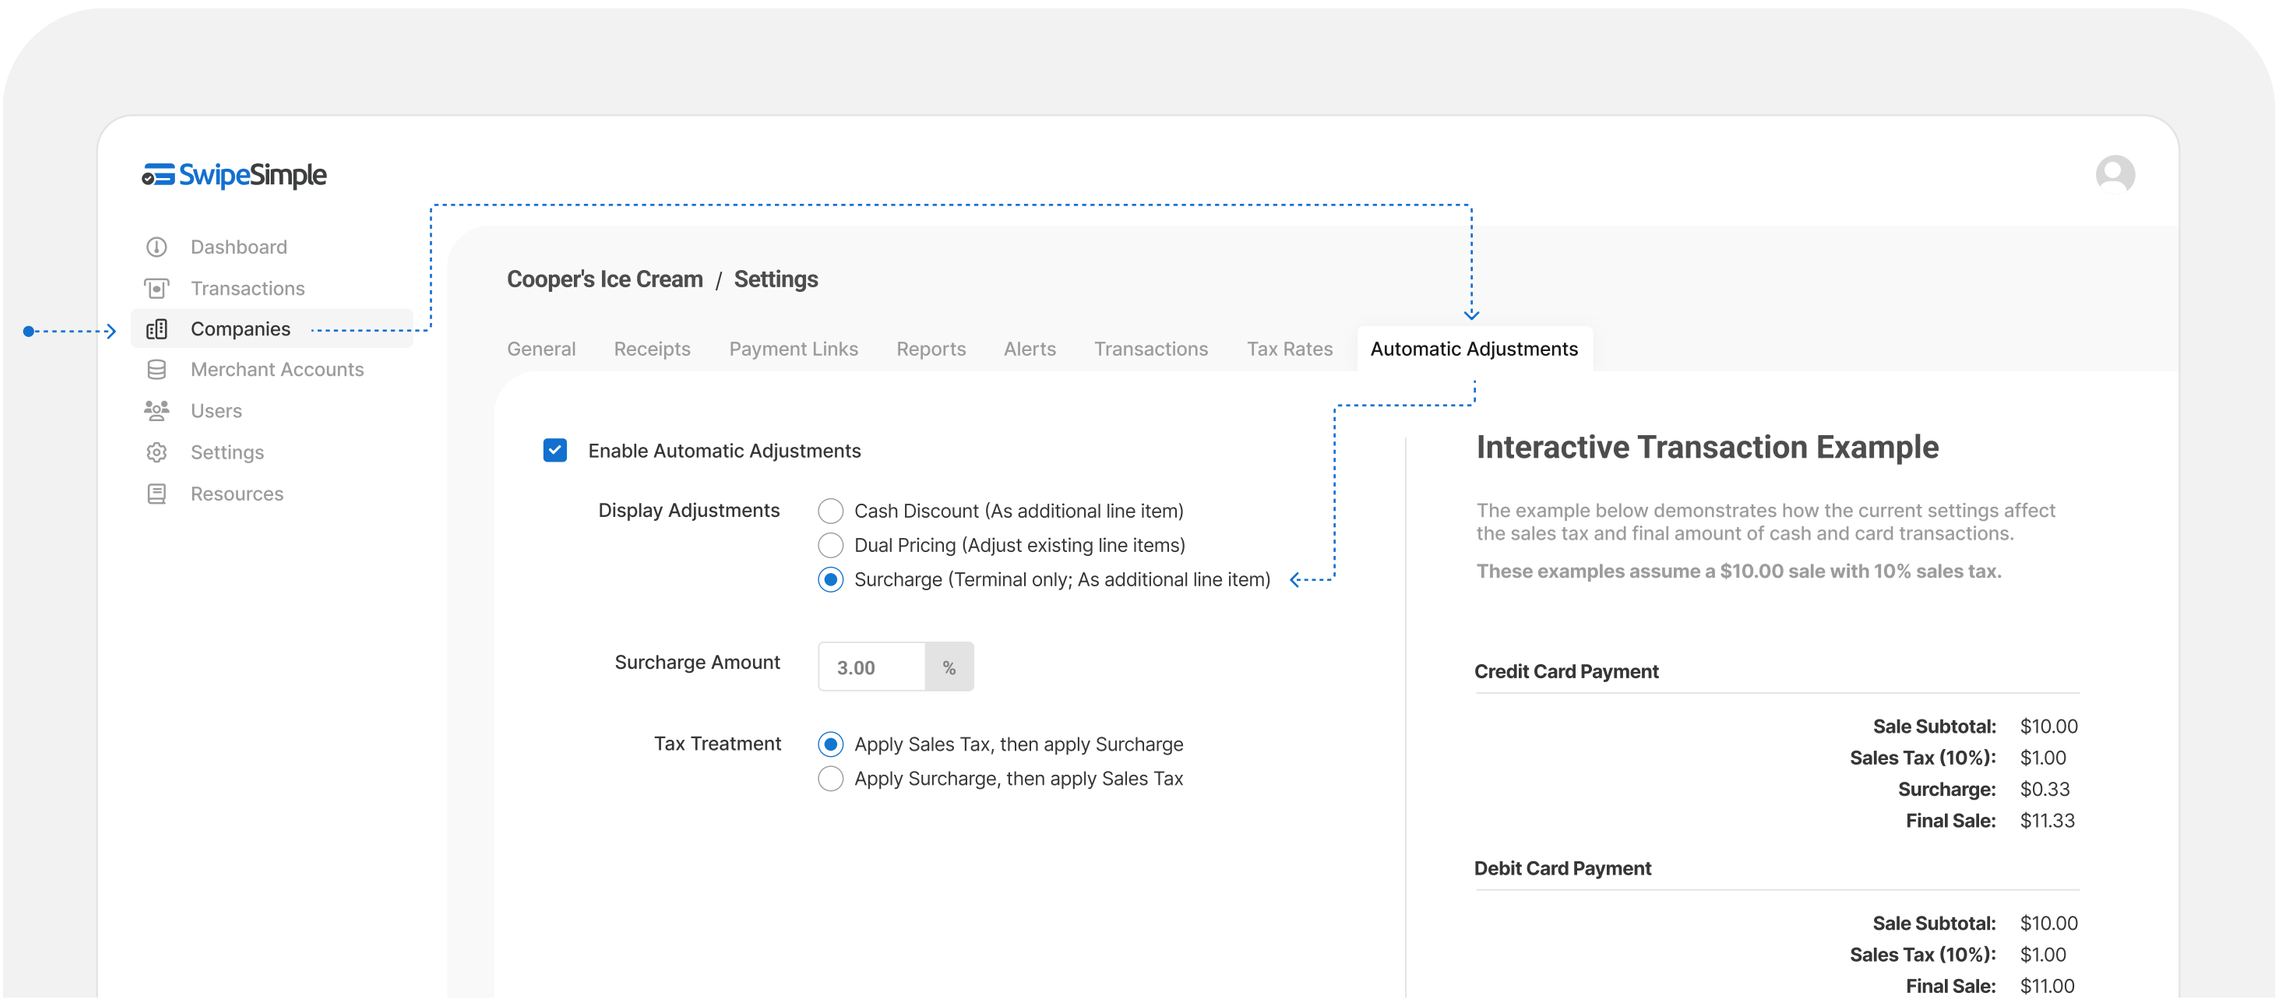

Automatically detects credit vs. debit cards, applying surcharge only when permitted.

How Surcharge Works

Setting Up Surcharge

An eligible Reseller can enable Surcharge through Company settings > Automatic Adjustments.

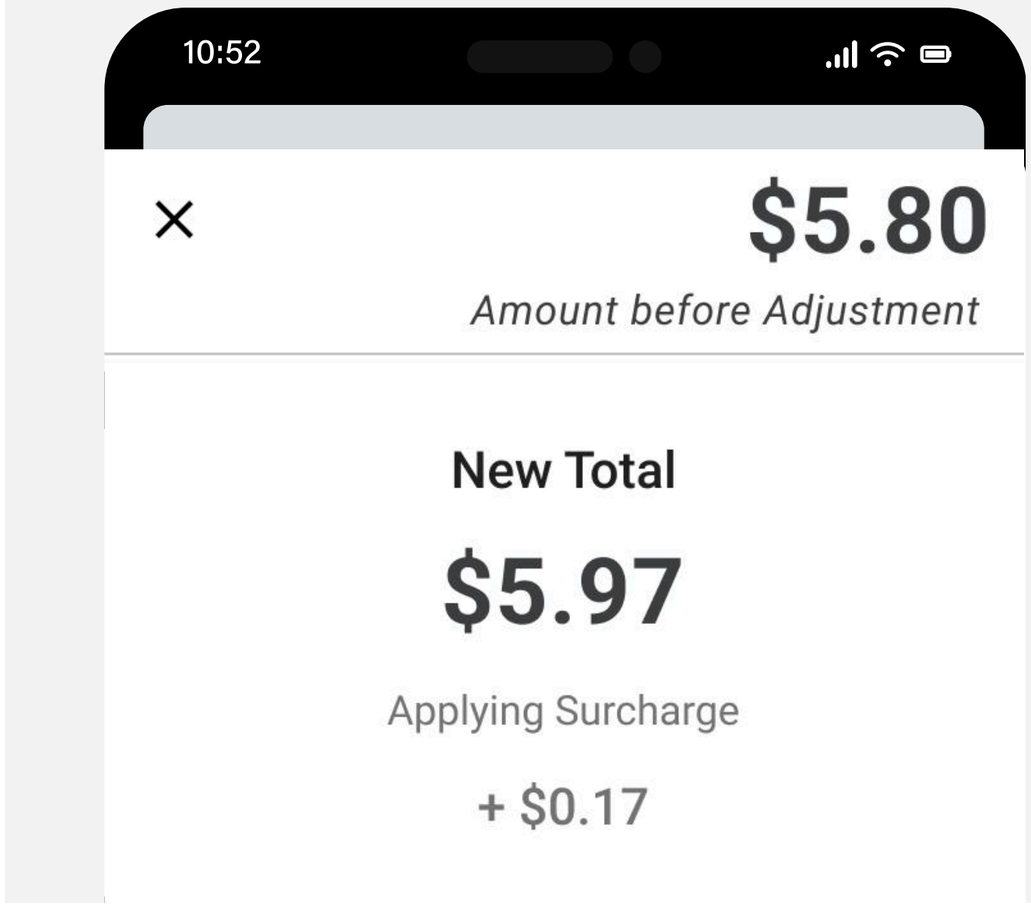

Select "Surcharge (Terminal only; As additional line item)", adjust the percentage amount, and choose how tax is treated (before or after Surcharge).

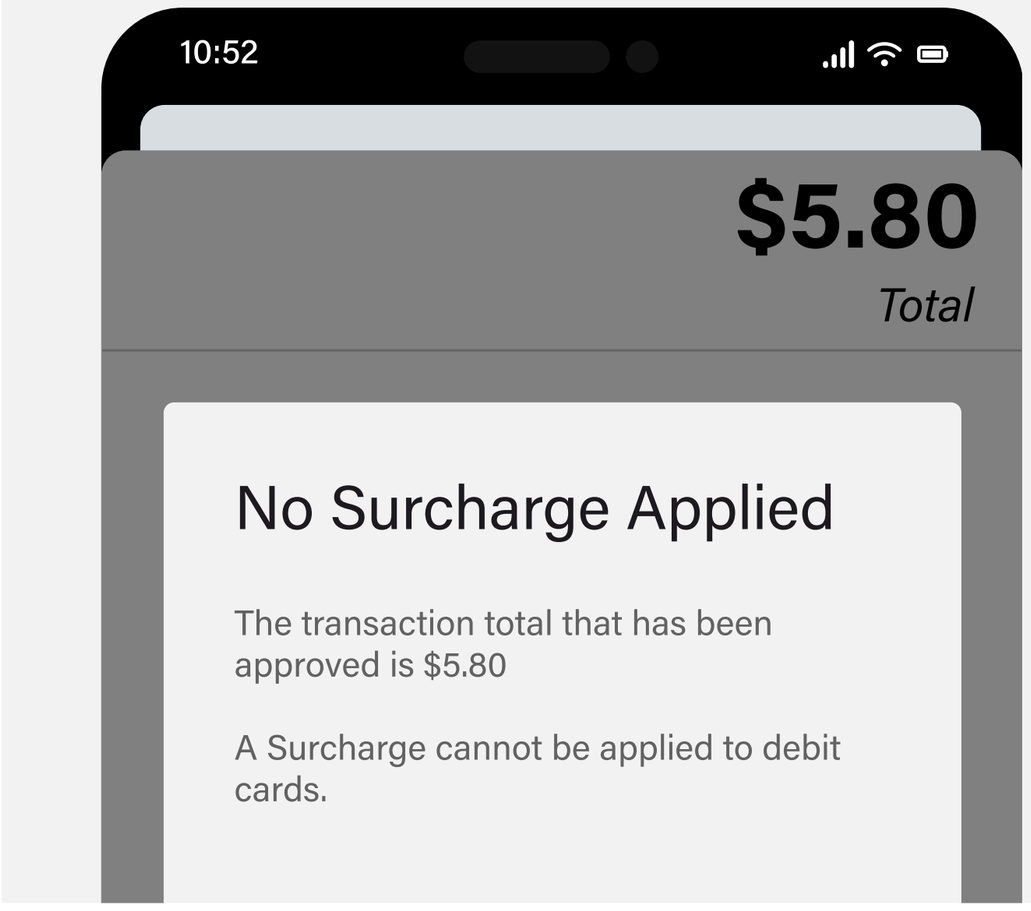

The interface provides a live example showing how Surcharge affects different transaction types.

Customer Transaction Flow

When a customer pays with a credit card, they'll see the original amount, the surcharge clearly labeled, and the new total. For debit cards, no surcharge appears. All surcharges display as separate line items on receipts, maintaining full transparency.
